

Two edge classes in the 17-node shipping graph

(a) Observed voyage connectivity · directed and time-varying

(b) Specified corridor connectivity · undirected and fixed

Entering the GAT: the two classes are stacked, then symmetrised and self-looped. Direction and edge type are not retained.

(a) 96 directed lanes; 106,992 voyages. Symmetrised voyage counts enter only as an attention prior (Appendix A.4.3).
