

- Dropped weeks (first 3 + last 1)
- Training front (pinned at 25 Jan 2019)
- Last 52 weeks (inner validation; slides right)
- Re-estimation origin (20 fits)
- Rest of block held fixed: no refit
- 4-week input -> 1-week target (below)

Same gold tail, different use in Flat and Deep

Front

Last 52 weeks

Flat

Tune on the gold tail, then refit on the full fold (blue + gold)

Deep

Architecture locked (lookback = 4, d = 32). Gold tail used only for early stopping; keep the checkpoint, do not refit on blue + gold. First fold is short, so the tail is ~20 weeks before it reaches 52.
